GENERAL DESCRIPTION FOR BASS COAST TEAM *

The V.H.S collective is pleased to propose the next evolution of the T-3000 for Bass Coast 2024—a repurposed arcade machine that revolutionizes user interaction through augmented live video and a multi-layered technological approach. Premiered at Bass Coast 2022, the T-3000 initially offered festival-goers the chance to view themselves through an innovative lens, merging reality with digital augmentation. Building on this foundation, we now aim to fully actualize the installation's potential by integrating advanced 3D hand tracking, facial and posture detection, enriching the user's immersive experience through direct manipulation of 3D objects and effects on screen.

For the 2024 iteration, we are incorporating several notable enhancements:

- Integration of UltraLeap Leap Motion 2, the pinnacle of skeletal hand tracking technology, enabling nuanced interaction with digital elements.
- Comprehensive development with Touch Designer for refined gesture recognition, facial tracking, and posture analysis.
- An innovative addressable LED array positioned on the piece's rear, designed to visually represent the user's hand movements in real time, creating a captivating visual feedback loop.
- A significant upgrade to the user interface with an improved front-facing camera for enhanced image clarity.

-A redesigned base and structure featuring dynamic addressable LEDs, which respond to user inputs and complement the display, enriching the interactive experience.

Necessary Upgrades and Maintenance:

-Replacement of the front screen to ensure optimal display quality following transit-related damage.

-Update of interaction components to maintain tactile responsiveness.

-Structural reinforcement to secure the installation's integrity and longevity.

-Custom fabrication of a screen harness to accommodate the new display, ensuring stability and visual performance.

Our commitment to pushing the boundaries of interactive art is embodied in the T-3000's evolution. By using the latest in technology, we aim to offer an interactive experience that not only engages but also inspires Bass Coast attendees as we have been inspired in the past. This proposal represents not just a continuation of the T-3000's journey but a leap towards realizing the full spectrum of interactive potential, inviting users to explore the confluence of physical and digital worlds in a personal and engaging way.

HOW IS THE PIECE INTERACTIVE? *

The T-3000 harnesses an advanced 3D tracking algorithm developed in TouchDesigner. This sophisticated platform empowers users to engage with and manipulate virtual objects & explore fluid dynamics in real time, despite the objects' absence in the physical realm. The installation's design further enhances the user experience by incorporating an LED array on its rear, creating a comprehensive 360-degree interactive environment. This not only broadens the scope of engagement by allowing users to see the immediate

visual feedback of their actions in a captivating display of light but also merges the tactile with the virtual, offering an immersive experience that challenges the boundaries between the user and the digital world.

GRANT CATEGORIES *

Category 3

SIZE OF TEAM *

SECOND TEAM MEMBER INFORMATION

Leah Michaux, whose focus is on Framing & Art Direction, plays a crucial role within our team by providing invaluable insights from a female perspective. Her unique viewpoint and creative vision contribute significantly to our project, ensuring diversity and inclusivity in our art direction. Leah's expertise not only enhances the aesthetic and conceptual depth of our work but also ensures that we engage a broader audience by incorporating perspectives that reflect a wider range of experiences and insights. Her presence and contribution are fundamental to our collective success.

THIRD TEAM MEMBER INFORMATION

Patrick Wilkie, who specializes in Interactive Digital Media Programming and Electrical Engineering, is pivotal to our team's ability to blend cutting-edge technology with engaging art. His expertise bridges the gap between complex digital systems and interactive user experiences, ensuring our installations are not only innovative but also seamlessly operational. Patrick's role involves crafting the technical backbone of our projects, enabling us to push the boundaries of interactive digital media art. His contributions are essential in transforming conceptual visions into tangible, immersive experiences that captivate.

BUDGET *

To ensure a comprehensive and detailed budget for the T-3000 installation, we have itemized all associated costs, taking into account Bass Coast Festival's emphasis on thoughtful financial planning. Our budget includes not only the costs for materials and components necessary for the installation's construction and enhancement but also accounts for transport, storage, and other expenses. Below is a breakdown of the estimated costs:

Replacement Plexiglass: \$200

LED matrix: \$720

Wood & steel for reinforcement & seating: \$300

Enttec DMX USB Pro: \$270

DMX cables: ~\$100

Leap Motion UltraLeap 2 (x2): \$500

Transport to and from the site: \$400

Replacement Arduino: \$39

Replacement screen: ~\$500

Replacement knobs & joystick: \$55

Miscellaneous electrical equipment: \$100

Neon flex LED rope for base perimeter x2 : \$100

Astro turf for ground cover: \$60

Total Projected Cost: \$2,824

Our budget has been carefully compiled to ensure all aspects of the installation are considered, from initial setup to final exhibition, ensuring the T-3000 is presented at its highest quality. We are mindful of Bass Coast's support for art installations and have aimed to optimize our resource allocation to maximize the impact of the provided funding. This budget reflects our dedication to creating a durable, engaging, and visually stunning installation that can be enjoyed by festival attendees and potentially at other events, maintaining the artwork's longevity and adaptability.

PUBLIC ARTWORK STATEMENT AND ARTIST OR TEAM BIO *

Where augmented reality and physical presence intertwine. The T-3000 invites interaction through 3D hand and facial recognition. A Hi-Fi front display coupled

with an LED matrix on the back side captures your movements in vibrant color, blurring the lines between digital and physical realms.

Paris, Patrick & Leah aim to create new perspectives, creating immersive experiences that seek to redefine artistic engagement at Bass Coast.

STAGING AND PRESENTATION *

For the T-3000's presentation at Bass Coast 2024, our staging design thoughtfully merges cutting-edge technology with natural aesthetics to create an immersive environment. The installation features a sophisticated base outfitted with addressable neon flex LEDs, which are not merely decorative but interactive, responding in real-time to the user's inputs. This innovative base doesn't just illuminate; it actively participates in the interactive experience, with lighting changes that reflect the movements and interactions occurring within the T-3000.

Within the confines of this dynamic, LED-lit base, we have placed astro turf, creating a verdant, tactile ground cover that brings a touch of the natural world into the digital interaction space. This setup ensures that the astro turf lies within the perimeter defined by the illuminated base, integrating the installation's technological and organic elements. The inclusion of the astro turf inside the base's borders offers a contrast that highlights the interactive nature of the T-3000, encouraging attendees to step into a uniquely engaging zone where every action is mirrored by a responsive light display.

The base's responsive lighting is synchronized with the installation's overall interactive ecosystem, including the addressable LEDs and the LED matrix on the rear. This approach to lighting and interaction ensures that the T-3000 is a cohesive, immersive experience from every angle. The integration of responsive lighting within the base, coupled with the naturalistic touch of the astro turf, exemplifies our commitment to creating an installation that is as visually captivating as it is interactive, inviting festival-goers into a space where digital technology and the natural environment coalesce.

FOOTPRINT ON THE GROUND *

W 150cm x L 150cm x H 200cm incl. base

IS YOUR PIECE OVER 6FT TALL? *

Yes

SUSTAINABILITY *

The T-3000 exemplifies sustainable innovation, built on a foundation of repurposed materials, including an arcade unit and its components, to minimize environmental impact. We prioritize the use of sustainable, energy-efficient materials such as LED lighting, and eco-friendly construction resources. Our approach extends to logistical planning, optimizing transport to reduce our footprint.

CULTURAL APPROPRIATION *

There does not appear to be any cultural appropriation present in this project.

ARTIST EXPERIENCE *

Paris and the team boast a rich history with Bass Coast, having secured five grants total for standout installations like the Superlush Tone Generator (2019), The Anomaly (2020), the original T-3000 (2022), Cryptic Mystic Dragon Automaton (2023) & Windows Vista Home Operating System (2023). Their work showcases a deep commitment to pushing the boundaries of interactive art.

IMAGE OF PAST WORK *

POWER PLAN *

Yes

POWER REQUIREMENTS *

To ensure the T-3000 installation operates seamlessly, we require a 120v power supply catering to the following devices, each with their estimated maximum amperage.

Tower PC: Requires up to 5 amps, serving as the heart of our installation for processing and interactive software.

HD LED Screen: Consumes approximately 3 amps, displaying high-definition visuals integral to the interactive experience.

LED Pixel Array: Utilizes about 2 amps, part of the dynamic visual feedback system responsive to user interaction.

LED Strip Ground Lighting & Detail Around Piece: Draws up to 2 amps, enhancing the aesthetic and immersive qualities of the installation.

In total, our installation's peak power consumption is estimated to be around 12 amps. This calculation allows for a buffer to ensure stable operation throughout the event, accommodating the dynamic nature of our interactive features and lighting effects.

STRUCTURAL PLAN *

The T-3000 leverages the original arcade unit's stability, enhanced with a robust base designed for high engagement environments. Additional reinforcements and strategic anchoring ensure safety amidst festival dynamics. Tested in previous deployments, its durability and structural integrity are proven, ready for the wiley activities of Bass Coast.

HIGH WIND AND RAIN DESIGN CONSIDERATIONS *

The T-3000 is engineered with weather resilience in mind, featuring internal waterproofing via a poly lining to safeguard against rain. For wind resistance, the installation includes a low-profile, weighted base that reduces wind load, preventing it from acting as a sail. Additionally, strategic anchoring points securely fasten it to the ground, ensuring stability against sustained high winds and gusts.

HIGH WIND ACTION PLAN *

Our high wind action plan prioritizes safety and responsiveness. A team member will be assigned to monitor weather conditions. This individual will be equipped with communication tools to maintain contact with festival organizers for updates. In the event of high wind alerts, our team is prepared to swiftly implement safety measures, including securing or adjusting the installation's anchoring system and, if necessary, temporarily disabling interactive elements to prevent damage.

HIGH WIND AND RAIN SAFETY REQUIREMENTS *

Yes

SHARP CORNERS AND TRIPPING HAZARDS *

The T-3000 is designed with safety as a priority. It features smooth edges, no protruding parts at eye level, and is free from tripping hazards, ensuring a safe environment around the clock.

SHARP CORNERS AND TRIPPING HAZARDS SAFETY REQUIREMENT *

Yes

RIGGING *

Our installation, the T-3000, is designed for ground placement without the need for suspension, eliminating the requirement for rigging support from Bass Coast's team. However, we welcome any safety checks and are open to discussions or advice from the team to ensure our setup aligns with safety guidelines.

SAFETY TERMS AND SAFETY CHECK REQUIREMENTS *

Yes

STORAGE AND TRANSPORTATION *

We're using a U-Haul for the transportation of the T-3000 to and from Bass Coast, acknowledging the inherently high costs associated with secure and safe art transport. This approach ensures the piece is handled with care throughout its journey. In terms of a backup plan, we will make arrangements with an alternative means of transport as a contingency to address any unforeseen circumstances, guaranteeing the installation's timely arrival and return.

Post-festival, the T-3000 will be stored in a dedicated space that has previously housed the piece. This storage facility offers a controlled environment to preserve the installation's integrity between events. The storage footprint is optimized for the T-3000's dimensions, ensuring it remains in pristine condition while not in use.

HAVE YOU ATTENDED AND/OR PARTICIPATED IN BASS COAST BEFORE? *

Yes

WHICH YEARS AND IN WHAT CAPACITY? *

Leah, Patrick and Paris form a dynamic trio deeply embedded in the Bass Coast community.

Paris, active from 2018 to 2023, has exercised his creativity through various artforms, debuting "Like A Dream" in 2023 alongside Sam Steele, an honor to set the tone for his brilliant set at Slay Bay. (look out for his new project "SCIENCE AT NIGHT" in future music applications ;)

Patrick emerged as a pivotal figure in 2023 with the Cryptic Mystic installation, demonstrating his prowess in leading complex, large-scale projects that enrich the festival's landscape with interactive artistry.

Leah, contributing significantly in 2019, 2022, and 2023, has excelled as a brilliant curator. Her pivotal role in delivering the Windows Vista Home Operating System in 2023, has brought a vital balance and perspective to the team, enhancing the collective's ability to create impactful, immersive experiences.

HOW DO YOU THINK YOUR PIECE WILL CONTRIBUTE TO THE ENVIRONMENT?

*

Our piece, with its vibrant lighting and immersive interactivity, is designed to seamlessly integrate into the festival's environment, offering attendees a unique opportunity to engage, explore, and lose themselves in a world of digital experimentation. It encourages curiosity and interaction in a way that enhances the overall atmosphere of the festival, creating memorable moments that resonate with the spirit of exploration and community.

HAVE YOU PRESENTED INSTALLATIONS AT OTHER FESTIVALS? *

No ;) <3

DOES YOUR INSTALLATION REQUIRE HEAVY MACHINERY? *

No

AMPLIFIED MUSIC *

No

INTERNATIONAL ART INSTALLATIONS *

No

BASS COAST TEAM REFERENCES *

Yes

BASS COAST REFERENCES CONTACT INFO AND DETAILS *

It's difficult to single out all the incredible individuals we've worked with. However, notable mentions include Liz Thompson and Scott Phalen, alongside the late Said Marcondes (Team Power). Our interactions with the Art Grants Team have also been consistently positive and impactful. These collaborations have enriched our projects & deepened our connection to the Bass Coast community.

OPPORTUNITY FOR ANY FURTHER COMMENTS, LINKS OR INFORMATION *

Our collective inspiration from Bass Coast has fueled our passion to participate and craft art and music that resonates with our core. We aim to create something that not only makes us proud but also serves as a beacon of inspiration to our younger selves and the wider community. It's an honor to contribute to a space that fosters such creativity and connection.

We are happy to provide more details, renders and elaborate further upon request. 😊
